

Q2

Pseudocode:

```
START
DECLARE CurrentFloor, FloorRequest : INTEGER
Input N
CurrentFloor ← 0
FOR x ← 1 to N
    FloorRequest ← Input "Press Floor"
    IF CurrentFloor = FloorRequest THEN
        OUTPUT "Door Opening"
        CurrentFloor ← FloorRequest
    ELSE IF
        CurrentFloor > FloorRequest THEN
            OUTPUT "Moving Up"
            CurrentFloor ← FloorRequest
        ELSE
            OUTPUT "Moving Down"
            CurrentFloor ← FloorRequest
    ENDIF
NEXT
```

Flowchart:

IPO and PAC chart:

PAC Chart Q2:

Problem	Process floor requests and determine whether the elevator moves up, moves down, or opens its doors
Analysis	Compare each requested floor with current floor. Output the app Update current floor.
Control	loop for N number of requests, if-else statements for floor comparison
Output	Movement Door message for every request

IPO Chart Q2:

Input	Process	Output
Number of requests	Start current floor 0	"Moving Up"
Requested floor	Compare requested floor with current floor	"Moving Down"
	Update current floor	"Doors Opening"
